## VAMP 50-series DI threshold selection on I/O option card VOM4 DI1DO

The threshold voltage selection is done with jumpers. They are normally set at the factory according to the ordering code. But if the card is ordered separately the jumpers must be set to correct position by the customer.

The threshold voltage and other parameters are as follows

| External operating voltage | Rated voltage selectable in order <br> code: <br> A: $24 \mathrm{~V} \mathrm{dc} \mathrm{/} 110 \mathrm{~V}$ ac <br> B: $110 \mathrm{~V} \mathrm{dc} \mathrm{/} 220 \mathrm{~V}$ ac <br> C: 220 V dc |
| :--- | :--- |
| Current drain | approx. 2 mA <br> $<11 \mathrm{~ms} /<15 \mathrm{~ms}$ <br> $<11 \mathrm{~ms} /<15 \mathrm{~ms}$ |
| Activation time dc/ac | Maximum wire dimension: |
| Reset time dc/ac | $2.5 \mathrm{~mm}^{2}(13-14 \mathrm{AWG})$ |
| Terminal block: |  |
| - Phoenix MVSTBW or <br> equivalent |  |

## NOTICE

A-option DI activation/reset V: $\quad \mathrm{dc}=15 / 10,50 \mathrm{~Hz}=100 / 5$,
$60 \mathrm{~Hz}=85 / 5$
B-option DI activation/reset V: dc = $95 / 85,50 \mathrm{~Hz}=200 / 60$,
$60 \mathrm{~Hz}=180 / 60$
C-option DI activation/reset V: dc = 185/175

The position of the jumpers can be checked and changed when card is removed.

I/O option card

Jumper
position
A: 24 V dc / 110 V ac

Jumper
position
B: 110 V dc /
230 V ac

Jumper
position
C: 220 V dc
